Foil for underfloor heating

add your logo

The underfloor heating foil serves as a damp proof membrane ensuring appropriate conditions during screed drying - it protects the floor structure layers from damp contained in the screed. The foil features a printed grid with metric markings, facilitating the installation of heating loops at equal distances.

Material: Laminate (Polyethylene, Metallised polypropylene)

Product ID	Length lm/ roll	Thickness (µm)
F-697585/130	50	130 ± 10%
F-697585/105	50	105 ± 10%
F-697585/70	50	70 ± 10%

printed metric scale available

Tacker gun

A high-performance installation tool designed for fast and precise pipe fastening in underfloor heating systems.

See all available tacker guns at page 96

Staples

Fixing staples are essential accessories for the stable and durable installation of pipes in underfloor heating systems. They are used to secure pipes to the insulation layer, ensuring a reliable and safe installation.

Our range includes both single staples and magazine staples (welded into strips of 25 pieces), which significantly speed up and simplify application using a tacker.
